One way to think of a programmer is as an author of a book. The author uses words to put together sentence structures that make up the content of the book, a programmer puts together 'sentences' that give tell the computer what to do.

Programmers usually have a specialization in one language, such as XML, PHP, Perl, HTML, or SQL.

Java is an object-oriented programming language used in distributed environments on the internet. It is a high-level language that is also easy to read and understand. With it, developers can “write once, run anywhere” (WORA), meaning that the compiled Java code will run on all Java-compatible platforms without the need for recompilation.
