~~Deep Sky with Your DSLR - Astrophotography - Sky ...~~

A guide scope is used for autoguiding the telescope. This is a smaller telescope that rides on top or next to your primary imaging telescope. It's job is to focus on a star within the field of view, and use it to keep the mount "guiding" on that area of the night sky. This can only be done by using a camera for this purpose only.

~~A Basic Deep Sky Setup for DSLR Astrophotography ...~~

A DSLR camera is the easiest way to get into Astrophotography. We started out with a very cheap Canon t3i from Ebay, and upgraded to a Canon 7D Mark II about a year and a half later. We have gotten great images with these, but we also had to trash lots of files over time because the settings we used weren't great for the type of target.

Quick Start Guide Part 1 for Beginner Digital Astrophotography Shutter Speeds, Aperture, ISO. Except for the moon, the stuff we want to shoot in the night sky is pretty faint. That... Focus. The next thing you will have to worry about is the focus. Once again, dig through the camera manual, or ...

~~Quick Start Guide Part 1 for Beginner Digital Astrophotography~~

Landscape astrophotography can even be done with a good smartphone camera, but most commonly (and most effectively) it will be done with a good DSLR or mirrorless camera fitted with a wide-angle lens. Frequently, landscape astrophotography will involve capturing our galaxy, the Milky Way, above the Earth.

~~The Ultimate Beginners Guide to Astrophotography (2020)~~

A DSLR camera attached to a telescope for prime focus astrophotography. Astrophotography covers a wide variety of styles and photography subjects. The type of image you're after is up to you. We all have our own goals and unique taste. Personally, deep-sky astrophotography through a telescope is my biggest passion.

~~Beginner Astrophotography Tips: How to Get Started~~

You too can learn the secrets of astrophotography with a DSLR camera! Beautiful images such as this one of the Orion, the Hyades and Pleiades can easily be taken with DSLR cameras. This is a simple 30 second exposure at f/3.5 at ISO 1600 taken with an 18-55mm zoom lens and a Canon EOS Digital Rebel XS (1000D) DSLR camera mounted on a fixed tripod.

~~Beginner's Guide to the DSLR Astrophotography by Jerry ...~~

A DSLR is a perfectly fine camera for getting into astrophotography. Past blogs have detailed how best to use a DSLR for nightscapes and lunar photography, and I've used DSLR data as examples for explanations of how cameras work and stretching, even dedicating an installment to figuring out the best ISO to use for your own camera.

~~A beginner's guide to astrophotography - skyatnightmagazine~~

We also stock DSLR tracking mounts dedicated for astrophotography with a camera and lens for wide field images, the popular and higly capable Star Adventurer range from SkyWatcher includes a WiFi mount you control from your phone that mounts to any photo tripod.

~~Astrophotography guide by Harrison Telescopes~~

The best dedicated CMOS camera for astrophotography in the DSLR's price range is ZWO ASI294MC one-shot color camera. The disadvantage of the dedicated CMOS camera for astrophotography excluding the steep learning curve with a new type of camera is that you will have more cables running around your imaging rig.

~~Best Camera For Astrophotography - Buying Guide~~

Most DSLR astrophotographers use Canon cameras. Canon releases the details of the camera's software. Nikon does not create a truly raw image Some Nikons allow the "Mode 3" work around. This allows the development of third party software, designed specifically for astrophotography.

~~DSLR Astrophotography - bf-astro.com~~

Canon is the most popular DSLR manufacturer on the astrophotography market, and it's probably the best brand to go if: You want specifically a DSLR and not a dedicated astronomy camera. The size of the camera doesn't matter for you (DSLRs are usually bigger and heavier than mirrorless and astro-dedicated cameras).

~~Astrophotography for Beginners - Tips & Guide on How to Start~~

Astrophotography is no different. There are the standard DSLRs, either full-frame or cropped. The mirrorless systems and even your smartphone could give you some great shots. There are even specialized Astrophotography cameras designed to capture the skies.
