Dermatology: An Illustrated Colour Text is an ideal resource for today ' s medical student, hospital resident, specialty registrar in dermatology or internal medicine, specialist nurse or family doctor. It presents the subject as a series of two page ' learning units ' , each covering important aspects of clinical dermatology. These units use an unsurpassed collection of colour clinical photographs of all major dermatological conditions, concise yet comprehensive text and key point boxes to aid quick access to information and examination preparation. They incorporate summaries of the essential skin biology and associated basic sciences that underpin clinical practice, as well as advice on established and emerging dermatological treatments, reflecting the ever expanding use of technology. Guidance is also given to dermatological emergencies and to the most useful online resources for updates and further reference. Building on previous success, this sixth edition has been fully revised throughout. A major advance are the accompanying electronic materials making it a more complete and engaging resource than ever before. Bonus electronic content — including self-test flashcards, multiple-choice questions and a wealth of extra clinical images, to help prepare for examinations, check your understanding and hone your diagnostic skills New and enhanced coverage of key and emerging areas — including skin cancer, biologic therapies, psychodermatology, dermatologic surgery, cosmetic procedures, genital dermatoses, pregnancy eruptions, yeast-related skin conditions, contact dermatitis and patch testing New line drawings and photographs incorporated throughout to further improve clarity and ensure comprehensive visual coverage of important dermatological conditions

This book presents a comprehensive coverage of clinical dermatology, including: review of basic anatomical and physiological principles ; survey of skin disease and the dermatological manifestation of other internal disorders ; summary of established and new dermatological treatments.

This concise textbook of dermatology is aimed at medical students, those preparing for the MRCP and MRCGP examinations and specialist nurses. The information is presented in a highly accessible format, using double page spreads for each topic. Extensive use of colour for both clinical photographs and graphics makes for a superb appearance. For review for examination preparation key point boxes are provided. In this fourth edition extensive revision has been made to the contents to reflect changes in the understanding of dermatological conditions at a molecular level and the changes in clinical practice. In addition the use of the internet for dermatological information by both doctors and patients is reviewed. Information presented in easy to access double-page spreads. Highly illustrated with full colour photographs and graphics. Summary boxes for examination preparation. Covers the subject from basic molecular mechanisms through to the principles of medical and surgical treatment. Gives references to internet URLs for further information. Includes a glossary of dermatological terms. New co-author introduced for the fifth edition.

This text, aimed primarily at medical students, presents a scientific basis for the understanding of and clinical approach to skin disease. It details the major dermatological conditions and outlines special topics, such as photoaging and dermatological surgery.

This textbook on haematology in the Illustrated Colour Text series is suitable for medical students, junior doctors and others needing a concise and practical introduction to the subject. Concise and manageable coverage of the major blood diseases and their treatment. Does not overload the reader with science, unlike some competing books. Focus is on the haematology patient and on the practical aspects of the subject. Makes use of the attractive features of the ICT series - double page spreads, lots of colour illustrations, summary boxes. Updating to take account of recent developments in stem cell biology. Increased emphasis on genomic and proteomic techniques in the diagnosis of haematological malignancy. Use of new imaging techniques including MRI and PET. Description of advances in treatment of leukaemia and lymphoma and in diagnosis and management of patients with thrombophilia and venous thrombosis. Development of new antimicrobial agents in management of immunosuppressed patients with infection. New double page spread on palliative care of patients with blood disorders. New illustrations.

EMBRYOLOGY provides a concise and highly illustrated text, which confines its descriptions to those that are relevant for modern undergraduate and postgraduate medical courses, and similar courses in other related disciplines. An appreciation of embryology is essential to understand topological relationships in gross anatomy and to explain many congenital anomalies. Each chapter is supplemented by clinical point ' boxes ' and by key revision points. Text in concise Illustrated Colour Text style, so core information on embryology can be quickly recognised and digested. Clear full colour diagrams and pictures make the embryological concepts clear and easily assimilated. Clinical boxes highlight essential points of importance to medical students.

High-quality clinical photos help make this a comprehensive yet succinct overview of the subject which can be used as a 'bedside' companion.

This is a concise, highly accessible introduction to medical virology, incorporating essential basic principles as well as a systematic review of viruses and viral diseases. It pays particular attention to developments in anti-viral therapy that are becoming increasingly effective in modern medicine. It is an ideal textbook for the information-overloaded student and an invaluable everyday companion for the busy professional who needs a good understanding of the current state of medical virology. In keeping with the highly successful format of other Illustrated Colour Texts, it presents the subject as a series of succinct 2 page ' learning units ' , using a superb collection of clear illustrations and clinical photographs, concise yet comprehensive text and key point boxes to aid quick access to information and examination preparation. So whether you are a medical student, junior doctor, medical scientist, trainee in infectious diseases or student on another allied medical course, this book is here to make your life easier! It will also provide a very solid foundation for any who plan to delve deeper into this fascinating field. Part of the popular Illustrated Colour Text series Information presented in double page spreads for easy learning Highly illustrated with both full colour graphics and clinical photographs Each spread includes a key point box for exam preparation
