Epidemiology and Health Promotion Considered the scientific discipline on which the Public Health is based, epidemiology is the science that studies diseases and related risk factors, as well as the complex relationships between causes and effects, using observational studies of the population and experimental clinical studies.

Epidemiology and Health promotion - CNR

Epidemiology and Health Promotion The point of departure used in drafting this health promotion model was Leavell and Clark's description of health promotion as the first phase of primary prevention (Fig. 1). Furthermore, the authors suggest that health promotion activities can be identified through a study of the interrelations of host, agent, and environment, insofar as they may influence ...
