In Aguado/Burt'sUnderstanding Weather & Climate, a first-rate textbook and inspired technology tutorials combine to engage students in learning about atmospheric behavior. The authors use everyday occurrences to illustrate meteorology and climatology. Dynamic illustrations from the book come to life in the new fully integrated MyMeteorologyLab website, where students have access to a variety of media and self study resources such as animated tutorials, videos, and satellite loops of atmospheric phenomena. While staying true to the text's rigorous and quantitative approach, the Sixth Edition incorporates the latest new science and issues, new technology and media to help both teach and visualize the toughest topics, with a more learner-centered architecture and design.

Derived from an undergraduate course taught by the author, this accessible book seeks to challenge and provoke readers by posing a series of topical questions concerning climate change and society. Topic summaries provide answers to technical, socio-economic and moral questions surrounding the deployment of climate science. These include how to build and test a climate model, whom and what is most at risk from climate change, and whether we should geoengineer the climate. Practical exercises and case studies provide deeper insights by taking readers through role-play activities and authentic climate change projects. Supporting materials, including notes for instructors and students, graphics, video-clips, games, and online resources, offer scope for further private study and group work. With a focus on applying climate science in practice, this book is ideal for students of geography, natural science, engineering and economics, as well as practitioners involved in the climate service industry.
