The cover is Holt Environmental Science Active Reading workbook. I noticed when I went to copy the first chapter's text prep that the content did not look like Environmental Science. Then I noticed that the interior page says it's the test prep for Physical Science...NOT Environmental Science, even though the cover is Environmental Science.

Our environmental problems are huge, and they require careful attention and action. The twenty-first century will be a crucial time in human history, a time when we must find solutions that allow people on all parts of our planet to live in a clean, healthy environment and have the resources they need for a good life. - p. 5.

Scientists have long sought to unravel the fundamental mysteries of the land, life, water, and air that surround us. But as the consequences of humanity's impact on the planet become increasingly evident, governments are realizing the critical importance of understanding these environmental systems and investing billions of dollars in research to do so. To identify high-priority environmental science projects, Grand Challenges in Environmental Sciences explores the most important areas of research for the next generation. The book's goal is not to list the world's biggest environmental problems. Rather it is to determine areas of opportunity that, with a concerted investment, could yield significant new findings. Nominations for environmental science challenges were solicited from thousands of scientists worldwide. Based on their responses, eight major areas of focus were identified: areas that offer the potential for a major scientific breakthrough of practical importance to humankind, and that are feasible if given major new funding. The book further pinpoints four areas for immediate action and investment.
