Un cahier d'exercices pour la remédiation et l'accompagnement personnalisé - Une batterie d'exercices différents de ceux des manuels, dont de nombreuses prises d'initiatives. Les consignes sont simples, pour permettre un travail en autonomie. - Des supports concrets pour la différenciation et pour l'accompagnement personnalisé.

First published in 1202, Fibonacci's Liber Abaci was one of the most important books on mathematics in the Middle Ages, introducing Arabic numerals and methods throughout Europe. This is the first translation into a modern European language, of interest not only to historians of science but also to all mathematicians and mathematics teachers interested in the origins of their methods.

This special volume of Progress in Molecular Biology and Translational Science provides a current overview of how memory is processed in the brain. A broad range of topics are presented by leaders in the field, ranging from brain circuitry to synaptic plasticity to the molecular machinery that contributes to the brain's ability to maintain information across time. Memory systems in the prefrontal cortex, hippocampus and amygdala are considered as well. In addition, the volume covers recent contributions to our understanding of memory from in vivo imaging, optogenetic, electrophysiological, biochemical and molecular biological studies. Articles from world renowned experts in memory Covering topics from signaling, epigenetic, RNA translation to plasticity Methodological approaches include molecular and cellular, behavioral, electrophysiological, optogenetic and functional imaging

From HIV to influenza, the battle between infectious agents and the immune system is at the heart of disease. Knowledge of how and why parasites vary to escape recognition by the immune system is central to vaccine design, the control of epidemics, and our fundamental understanding of parasite ecology and evolution. As the first comprehensive synthesis of parasite variation at the molecular, population, and evolutionary levels, this book is essential reading for students and researchers throughout biology and biomedicine. The author uses an evolutionary perspective to meld the terms and findings of molecular biology, immunology, pathogen biology, and population dynamics. This multidisciplinary approach offers newcomers a readable introduction while giving specialists an invaluable guide to allied subjects. Every aspect of the immune response is presented in the functional context of parasite recognition and defense--an emphasis that gives structure to a tremendous amount of data and brings into sharp focus the great complexity of immunology. The problems that end each chapter set the challenge for future research, and the text includes extensive discussion of HIV, influenza, foot-and-mouth disease, and many other pathogens. This is the only book that treats in an integrated way all factors affecting variation in infectious disease. It is a superb teaching tool and a rich source of ideas for new and experienced researchers. For molecular biologists, immunologists, and evolutionary biologists, this book provides new insight into infectious agents, immunity, and the evolution of infectious disease.

Tavleen Singh's acclaimed and bestselling memoir begins in the summer of 1975 when, not yet twenty-five, she started working as a junior reporter in the Statesman in New Delhi. Within five weeks, Prime Minister Indira Gandhi declared the Emergency, and soon reckless policies said to be authored by her younger son were unleashed on India's citizens. In 1984, following Indira Gandhi's assassination, Rajiv Gandhi became Prime Minister, fortified by a huge mandate from a nation desperate for change. But, belying its hopes, the young leader chose for himself a group of advisors, friends and acolytes just as unaware as him of the ground realities of a complex nation. It was the beginning of a political culture of favouritism and ineptitude that would take hold at the highest levels of government, stunting India's ambitions and frustrating its people for years to come. A sharp account of these turbulent years, *Durbar* describes the Nehruvian era of Singh's childhood, the Emergency of her youth and the political shifts that followed, bringing with them insurgencies, massacres, and crises internal and external. This remarkable memoir, vivid with the colour of election campaigns and society dinners, low conspiracies and high corruption, reminds us of this truth: that if India is to achieve a better future, the past cannot be ignored or forgotten.

A paperback edition of successful and well reviewed 1995 graduate text on applied mathematics for engineers.

"Simplexity, as I understand it, is the range of solutions living organisms have

found, despite the complexity of natural processes, to enable the brain to prepare an action and plan for the consequences of it. These solutions are simplifying principles that enable the processing of information or situations, by taking into account past experience and anticipating the future. They are neither caricatures, shortcuts, or summaries. They are new ways of asking questions, sometimes at the cost of occasional detours, in order to achieve faster, more elegant, more effective actions." A. B. As Alain Berthoz demonstrates in this profoundly original book, simplicity is never easy; it requires suppressing, selecting, connecting, thinking, in order to then act in the best way possible. And what if we, in turn, are inspired by the living world to process the complexity that surrounds us? Alain Berthoz is professor at the Collège de France where he is co-director of the Laboratoire de physiologie de la perception et de l'action. [Laboratory for the physiology of perception and action]. He is a member of the French Academy of Sciences, and is the author of *Le Sens du mouvement* [The Brain's Sense of Movement] and *La Décision* [Emotion and Reason].
