The photos in this edition are black and white. Mitsubishi's 4G63t engine is among the most powerful engines ever in the sport-compact world. It's not uncommon to find one of these four-cylinder, iron-block, aluminum-headed, 2-liter turbocharged monsters making more than 1,000 horsepower with the right modifications and tuning - well above the 200-300 hp produced in the factory-made engines. Bolted into such cars as the Mitsubishi Lancer Evolution, Eclipse, and Galant, and the Eagle Talon and Plymouth Laser, the 4G63t has more than a cult following among sport-compact enthusiasts, who know and respect this engine's immense performance potential at the track or on the street. Up until now, in-depth performance information on the 4G63t has been hard to find. For this book, author Robert Bowen went straight to the source, Robert Garcia of Road/Race Engineering in Santa Fe Springs, California. RRE is the most well-known and respected Mitsubishi turbo performance shop in the United States, and Garcia is its in-house engine builder. Mitsubishi enthusiasts will benefit from Garcia's expertise and be able to build better, stronger engines than ever before. "How to Build Max-Performance Mitsubishi 4G63t Engines" covers every system and component of the engine, including the turbocharger system and engine management. More than just a collection of tips and tricks, this book includes a complete history of the engine and its evolution, an identification guide, and advice for choosing engine components and other parts. Profiles of successful built-up engines show the reader examples of what works, and the book includes helpful guidance for choosing your own engine building path.

From the critically-acclaimed author of the international bestseller VOX comes a suspenseful new novel that examines a disturbing near future where harsh realities follow from unreachable standards. It's impossible to know what you will do... Every child's potential is regularly determined by a standardized measurement: their quotient (Q). Score high enough, and attend a top tier school with a golden future. Score too low, and it's off to a federal boarding school with limited prospects afterwards. The purpose? An improved society where education costs drop, teachers focus on the more promising students, and parents are happy. When your child is taken from you, Elena Fairchild is a teacher at one of the state's elite schools. When her nine-year-old daughter bombs a monthly test and her Q score drops to a disastrously low level, she is immediately forced to leave her top school for a federal institution hundreds of miles away. As a teacher, Elena thought she understood the tiered educational system, but as a mother whose child is now gone, Elena's perspective is changed forever. She just wants her daughter back. And she will do the unthinkable to make it happen.

In Asymmetric Returns, financial expert Alexander Ineichen elevates the critical discussion about alpha versus beta and absolute returns versus relative returns. He argues that controlling downside volatility is a key element in asset management if sustainable positive compounding of capital and financial survival are major objectives. Achieving sustainable positive absolute returns are the result of taking and managing risk wisely, that is, an active risk management process where risk is defined in absolute terms and changes in the market place are accounted for. The result of an active risk management process when successful is an asymmetric return profile, that is, more and higher returns on the upside and fewer and lower returns on the downside. Ineichen claims that achieving Asymmetric Returns is the future of active asset management. Alexander W. Ineichen, CFA, CMA, is Managing Director and Senior Investment Officer for the Alternative Investment Solutions team, a key provider within Alternative and Quantitative Investments, itself a business within UBS Global Asset Management. He is also on the Board of Directors of the Chartered Alternative Investment Analyst Association (CAIAA). Ineichen is the author of the two UBS research publications In Search of Alpha-Investing in Hedge Funds (October 2000) and The Search for Alpha Continues-Do Fund of Hedge Funds Add Value? (September 2001). As of 2006 these two reports were the most often printed research papers in the documented history of UBS. He is also author of the widely popular Absolute Returns-The Risk and Opportunities of Hedge Fund Investing, also published by John Wiley & Sons.
