It takes a chronological approach to the subject, from its theoretical conception in the late 1800s, through important market experiments just prior to World War II. Coverage is global and multilingual, with material from French, German, Russian, and English sources. Each chapter begins with a historical essay that places the period in context. After 1927, each chapter focuses on a single year. The coverage weaves together the discoveries and developments in all countries, reporting on the work of solitary inventors, as well as research teams. The text ties together annotated citations that make up the bulk of each chapter, and excerpts from important documents or eyewitness accounts. Each chapter also contains a chronology of the advances and breakthroughs during the period covered. The entire work is carefully cross-referenced and an indexed to provide easy access.
