Tucked in among the lakes and snowy woods of Minnesota, the tiny community of Little Haven is a place where couples who engage in age play are welcomed. Among its inhabitants are five women-Angela, Claire, Kara, Bailey, and Tabitha-each of whom has a man she knows as her loving daddy. Little Haven features five brand-new titles from five excellent erotic romance authors. This collection includes: Daddy's Little Angela, by Alex Reynolds Even though her own daddy is always more than ready to spank her bare bottom when she is naughty, Angela sometimes can't help feeling superior to the other women in Little Haven, particularly the ones who act the youngest. But her daddy will not tolerate her being mean to others, and after she makes fun of another girl and hurts her feelings badly, he decides that some very thorough, embarrassing discipline is needed. Angela will be spanked, bathed, made to wear baby clothes, and treated like a very little girl until her daddy is sure that she has learned her lesson. Daddy's Little Sweetheart, by Meredith O'Reilly Claire's life is exactly the way she wants it to be. During the week she's an adult with a full-time job, and on the weekends Jensen is her daddy and she's his little girl, free to relax, play with toys, and cuddle in his arms. But when Claire starts missing meals routinely and coming home from work more stressed than he's ever seen her, Jensen knows that something needs to change, and he decides that Claire needs more than just a weekend as a little. Will Claire trust her daddy's judgment, or will she spend the next ten days with a very sore bottom? Brody's Little Brat, by Adaline Raine When life starts to get out of hand for Kara, her boyfriend, Brody, decides that it is time for him to take charge. She needs a firm but compassionate daddy, and he loves her more than enough to give her exactly what she needs. From now on he will be ready to

spank her soundly when her rebellious behavior warrants it, build her up when she is down on herself, and even take her to the town doctor for an exam when she is ill. Kara blossoms under Brody's tender care, but can she really trust that her daddy will always be there for her? *Bailey's Little Adventure*, by Summer GraystoneBailey loves role-playing as daddy's naughty little girl, and nothing is more fun than dressing like a teen and bratting her husband, who is always ready to punish her properly before pleasuring her more than she would have thought possible. When she discovers that he would like to tie her up so that she is completely vulnerable and at his mercy, she trusts him to keep her safe, even when he pushes her past her comfort zone. But when she makes a mistake in real life that disappoints her daddy, can she trust that he will be there for her no matter what? *Daddy Knows Best*, by Normandie AllemanCareer woman Tabitha is less than excited when her boyfriend, Neal, insists that she take a break from her high-stress job in Chicago and move with him to Little Haven. Despite her initial disdain for the town, Tabitha eventually begins to find a place for herself in her new community, and Neal's increasing dominance in the bedroom leaves her longing for more. But she's been keeping an important secret from him about her job back in the city. When he discovers the truth, will it tear them apart or will Neal be able to forgive his little girl? Publisher's Note: Little Haven contains spankings, sexual scenes, age play, elements of BDSM, and more. If such material offends you, please don't buy this book.

This 'dream-laden and spooked' (Marina Warner, London Review of Books) story is to many one of the best-loved books of the twentieth century. Munthe spent many years working as a doctor in Southern Italy, labouring unstintingly during typhus, cholera and earthquake disasters. It was during this period that he came across the ruined Tiberian villa of San Michele, perched high above the glittering Bay of Naples on Capri. With the help of Mastro Nicola and his three sons, and with only a charcoal sketch roughly drawn on a garden wall to guide them, Munthe devoted himself to rebuilding the house and chapel. Over five long summers they toiled under a sapphire-blue sky, their mad-cap project leading them to buried skeletons and ancient coins, and to hilarious encounters with a rich cast of vividly-drawn villagers. *The Story of San Michele* reverberates with the mesmerising hum of a long, hot Italian summer. Peopled with unforgettable characters, it is as brilliantly enjoyable and readable today as it was upon first publication. The book quickly became an international bestseller and has now been translated into more than 30 languages; it is today an established classic, and sales number in the millions.

Prepared by the Design Loads on Structures during Construction Standards Committee of the Codes and Standards Activities Division of the Structural Engineering Institute of ASCE Design loads during construction must account for the often short duration of loading and for the variability of temporary loads. Many elements of the completed structure that provide strength, stiffness, stability, or continuity may not be present during construction. Design Loads on Structures during Construction, ASCE/SEI 37-14, describes the minimum design requirements for

construction loads, load combinations, and load factors affecting buildings and other structures that are under construction. It addresses partially completed structures as well as temporary support and access structures used during construction. The loads specified are suitable for use either with strength design criteria, such as ultimate strength design (USD) and load and resistance factor design (LRFD), or with allowable stress design (ASD) criteria. The loads are applicable to all conventional construction methods. Topics include: load factors and load combinations; dead and live loads; construction loads; lateral earth pressure; and environmental loads. Of particular note, the environmental load provisions have been aligned with those of Minimum Design Loads for Buildings and Other Structures, ASCE/SEI 7-10. Because ASCE/SEI 7-10 does not address loads during construction, the environmental loads in this standard were adjusted for the duration of the construction period. This new edition of Standard 37 prescribes loads based on probabilistic analysis, observation of construction practices, and expert opinions. Embracing comments, recommendations, and experiences that have evolved since the original 2002 edition, this standard serves structural engineers, construction engineers, design professionals, code officials, and building owners.

Archimedes is held in high esteem by mathematicians, physicists and engineers as one of the most brilliant scientists of all time. These proceedings contain original, unpublished papers with the primary emphasis on the scientific work of Archimedes and his influence on the fields of mathematics, science, and engineering. There are also papers dealing with archaeological aspects and the myths and legends about Archimedes and about the Archimedes Palimpsest. Papers on the following subjects form part of the book: Hydrostatics (buoyancy, fluid pressure and density, stability of floating bodies); Mechanics (levers, pulleys, centers of gravity, laws of equilibrium); Pycnometry (measurement of volume and density); Integral Calculus (Archimedes as the father of the integral calculus, method of exhaustion, approximation of pi, determination of areas and volumes); Mathematical Physics (Archimedes as the father of mathematical physics, Law of the Lever, Law of Buoyancy, Axiomatization of Physics); History of Mathematics and Mechanics (Archimedes' influence in antiquity, the middle ages, the Renaissance, and modern times; his influence on Leonardo da Vinci, Galileo, Newton, and other giants of science and mathematics); Ancient Machines and Mechanisms (catapults, water screws, iron hands, compound pulleys, planetaria, water clocks, celestial globes, the Antikythera Mechanism); Archimedean Solids (their rediscovery in the Renaissance and their applications in materials science and chemistry); Archimedean Legends (how stories of golden crowns, eureka moments, naked runs, burning mirrors, steam cannons, etc., have influenced us through the ages, whether true or not); The Cattle Problem (how its 18th century rediscovery inspired the study of equations with integer solutions); Teaching the Ideas of Archimedes (how his life and works have influenced the teaching of science, mathematics, and engineering).
