Thoroughly revised and updated, *Community Nutrition: Planning Health Promotion and Disease Prevention, Second Edition* provides students with the knowledge, skills, tools, and evidence-based approaches that they need to promote health and prevent diseases. The Second Edition provides pertinent statistics on the national health objectives for 2010 and discusses traditional concepts as well as current and emerging nutrition issues. Real-world examples throughout the text explain nutritional concepts and present the reader with an application of these important topics. Instead of presenting the business and hospital-based care perspective used by most other books in this area, this text focuses on public health and community-based care. Part II focuses on the knowledge and intervention skills needed to promote health and prevent disease throughout the life cycle. Part III focuses on the skills, knowledge, and tools community nutritionists need to design effective nutrition and health promotion programs. New to the Second Edition: Public and Community Health Objectives including Canadian, U.S., and World Health Promotion Objectives Healthy People 2020 and the Healthy People 2010 Progress Report The Nutrition Care Process approved for the profession of nutrition and dietetics practice Mapping tools in community assessment Nutrition Care Process Evidence-Based Practice

Guide for nutrition professionals to implement the four steps of the Nutrition Care Process: assessment, diagnosis, intervention, and monitoring and evaluation

The adoption of telehealth is growing, accompanied by a diversification of service delivery and a broadening of access. All of this is pushing the boundaries of traditional healthcare worldwide. Latest developments include the growth of Mobile Health (mHealth), with access to information and services by means of personal devices such as tablet computers and smart phones, virtual healthcare services, which use online interactive environments to engage with the subject of care and remotely enable or mimic the desired patient-clinician relationship, and the personal and home health monitoring market. This book presents the proceedings of Global Telehealth 2015 (GT2015), hosted by COACH: Canada's Health Informatics Association, and held in May 2015, in Toronto, Canada. The theme of this year 's conference is 'Serving the Underserved: Integrating Technology & Information for Better Healthcare'. The leadership and knowledge reflected in the 25 papers collected here will promote the equity of access and uniform provision of healthcare services and influence health policy and strategic decisions worldwide, and the book will be of interest to all those whose work involves the various forms of telehealth in use today.

Despite their widespread coverage in the media, there is little emphasis on nutrition in books in psychology, and most textbooks in nutrition barely acknowledge the behavioral correlates of nutrient status. This book will provide interested readers in the fields of nutrition and psychology with information on how these two areas of current research interface. Traditional topics (e.g. micronutrients, sugar, eating disorders) are addressed, as well as the newest topics

(e.g. herbs, PUFAs, obesity). Critically reviewed are research methods and results that demonstrate the utility of considering both perspectives when designing studies to explore human behavior.

Nursing-focused and easy-to-read, this full-color manual delivers all the information you need to understand how tests work, interpret their results, and provide quality patient care—pre-test, intra-test, and post-test.

Eating disorders are potentially life-threatening psychiatric illnesses commonly accompanied by serious medical problems. They typically appear during adolescence or early adulthood, a time when young people are heading to college or interviewing for a first job. Many people recover fully from eating disorders, but others become chronically ill, and symptoms can continue into middle age and beyond. Written by leading authorities in eating disorders research and treatment, *Eating Disorders: What Everyone Needs to Know®* answers common questions about eating disorders, including anorexia nervosa, bulimia nervosa, and binge eating disorder, as well as a newly described condition, avoidant/restrictive food intake disorder (ARFID). Practical yet authoritative, the book defines the eating disorders, explains what we know about them based on the latest science, and describes how treatment works. Importantly, the book dispels common myths about eating disorders, such as the notion that they occur only amongst the affluent, that they affect only girls and women, or that they simply result from environmental factors such as the fashion industry and society's obsession with thinness. In reality, as the book explains, there is substantial evidence that eating disorders are brain-based illnesses that do not discriminate, and that they have been around for a very long time. *Eating Disorders: What Everyone Needs to Know®* is essential reading for those seeking authoritative and current information about these often misunderstood illnesses.
