A general plastic analysis can be carried out in SCIA Engineer for any 2D members (plates, walls, shells). There are four types of general plasticity in Scia Engineer : Tresca, von Mises, Drucker-Prager and Mohr-Coulomb. Tresca and von Mises yield condition s are suitable for ductile materials in general, such as metals (steel, aluminium...). It is a symmetric behaviour, acting in the same way in tension and compression, with or without hardening in the plastic branch.
