recent resurrection in the form of the Queen Elizabeth class carriers, the largest ships ever built for the Royal Navy. Despite prophecies that nuclear weapons would make conventional forces obsolete, British carrier-borne aircraft were almost continuously employed. The Royal Navy faced new challenges in places like Korea, Egypt, and the Persian Gulf. During these trials the Royal Navy invented techniques and devices crucial to modern carrier operations, pioneering novel forms of warfare tactics for countering insurgency and terrorism. This book combines narratives of poorly understood operations with clear analysis of their strategic and political background. With beautiful illustrations and original research, *British Carrier Strike Fleet* tells an important but largely untold story of renewed significance as Britain once again embraces carrier operation.

Among all the celebrations of the RAF ' s centenary, it was largely forgotten that the establishment of an independent air force came at a cost – and it was the Royal Navy that paid the price. In 1918 it had been pre-eminent in the technology and tactics of employing aircraft at sea, but once it lost control of its own air power, it struggled to make the RAF prioritize naval interests, in the process losing ground to the rival naval air forces of Japan and the United States. This book documents that struggle through the cash-strapped 1920s and ' 30s, culminating in the Navy regaining control of its aviation in 1937, but too late to properly prepare for the impending war. However, despite the lack of resources, British naval flying had made progress, especially in the advancement of carrier strike doctrine. These developments are neatly illustrated by

the experiences of Lieutenant William Lucy, who was to become Britain ' s first accredited air ' ace ' of the war and to lead the world ' s first successful dive-bombing of a major warship. Making extensive use of the family archive, this book also reproduces many previously unseen photographs from Lucy ' s album, showing many aspects of life in the Fleet Air Arm up to the end of the Norway campaign. Although it is beyond the scope of this book, in November 1940 the inter-war concentration on carrier strike was to be spectacularly vindicated by the air attack on the Italian fleet at Taranto – it inspired the Japanese to a far larger effort at Pearl Harbor the following year, but the Royal Navy had shown the way.

Individual chapters cover the design and construction of each class, with full technical details, and there are extensive summaries of every ship's career. Apart from the obvious large-deck carriers, the book also includes seaplane carriers, escort carriers and MAC ships, the maintenance ships built on carrier hulls, unbuilt projects, and the modern LPH. It concludes with a look at the future of naval aviation, while numerous appendices summarise related subjects like naval aircraft, recognition markings and the circumstances surrounding the loss of every British carrier. As befits such an important reference work, it is heavily illustrated with a magnificent gallery of photos and plans, including the first publication of original plans in full colour, one on a magnificent gatefold. In August 1944 the British Pacific Fleet did not exist. Six months later it was strong enough to launch air attacks on Japanese territory, and by the end of the war it constituted the most powerful force in the history of the Royal Navy, fighting as professional equals alongside the US Navy in the thick of the action. How this was achieved by a nation nearing exhaustion after five years of conflict is a story of epic proportions in which ingenuity, diplomacy and dogged persistence all played a part. technical triumph, the BPF was uniquely complex in its make-up: its Commander-in-Chief was responsible to the Admiralty for the general direction of his Fleet; took operational orders from the American Admiral Nimitz; answered to the Government of Australia for the construction and maintenance of a vast base infrastructure, and to other Commonwealth Governments for the ships and men that formed his fully-integrated multi-national fleet. This ground-breaking new work by David Hobbs describes the background, creation and expansion of the British Pacific Fleet from its first tentative strikes, through operations off the coast of Japan to its impact on the immediate post-war period, including the opinions of USN liaison officers attached to the British flagships. The book is the first to demonstrate the real scope and scale of the British Pacific Fleet ' s impressive achievement.

The new breed of American fast aircraft carriers could make thirty-three knots, and each carried almost 100 strike aircraft. Brought together as Task Force 58, also known as the Fast Carrier Task Force, this awesome armada at times comprised more than 100 ships carrying more than 100,000 men afloat. By 1945, more than 1,000-combat aircraft, fighters, dive- and torpedo-bombers could be launched in under an hour. The fast carriers were a revolution in naval warfare – it was a time when naval power moved away from the big guns of the battleship to air power projected at sea. Battleships were eventually subordinated to supporting and protecting the fast carriers, of which, at its peak, Task Force 58 had a total of seventeen. This book covers the birth of naval aviation, the appearance of the first modern carriers in the 1920s, through to the

famous surprise six-carrier _Kid? Butai_ Japanese raid against Pearl Harbor on 8 December 1941 and then the early US successes of 1942 at the Battles of the Coral Sea and Midway. The fast carriers allowed America, in late 1942 and early 1943, to finally move from bitter defence against the Japanese expansionist onslaught, to mounting her own offensive to retake the Pacific. Task Force 58 swept west and north from the Solomon Islands to the Gilbert and Marshall Islands, neutralising Truk in Micronesia, and Palau in the Caroline islands, before the vital Mariana Islands operations, the Battle of Saipan, the first battle of the Philippine Sea and the Great Marianas Turkey Shoot. The strikes by Task Force 58 took Allied forces across the Pacific, to the controversial Battle of Leyte Gulf and to Iwo Jima and Okinawa. Task Force 58 had opened the door to the Japanese home islands themselves – allowing US bombers to

finally get close enough to launch the devastating nuclear bombing raids on Hiroshima and Nagasaki. Task Force 58 participated in virtually all the US Navy ' s major battles in the Pacific theatre during the last two years of the war. Having spent many years investigating naval shipwrecks across the Pacific, many the result of the devastating effectiveness of Task Force 58, diver and shipwreck author Rod Macdonald has created the most detailed account to date of the fast carrier strike force, the force that brought Japan to its knees and brought the Second World War to its crashing conclusion.

For the first time, this book tells the story of how naval air operations evolved into a vital element of the Royal Navy's ability to fight a three-dimensional war against both the Kriegsmarine and

Luftwaffe. An integral part of RN, the Fleet Air Arm was not a large organization, with only 406 pilots and 232 front-line aircraft available for operations in September 1939. Nevertheless, its impact far outweighs its numbers; it was an RN fighter that shot down the first enemy aircraft of the war, and an RN pilot was the first British fighter "ace" with 5 or more kills. The Fleet Air Arm's record of achievements in northern waters went on to include the Norwegian Campaign, the crippling of Bismarck, the gallant sortie against Scharnhorst and Gneisenau as they passed through the Channel, air attacks on enemy E-boats in the narrow seas, air cover for the Russian convoys, air attacks that disabled Tirpitz, and strikes and minelaying operations against German shipping in the Norwegian littoral that continued until May 1945. By the end of the war in Europe the FAA had grown to 3243 pilots and 1336 aircraft. This

book sets all these varied actions within their proper naval context and both technical and tactical aspects are explained with 'thumb-nail' descriptions of aircraft, their weapons and avionics. Cross reference with the Fleet Air Arm Roll of Honour has been made for the first time to put names to those aircrew killed in action wherever possible as a mark of respect for their determination against enemy forces on, above and below the sea surface which often outnumbered them. The Fleet Air Arm and the War in Europe completes David Hobbs's much-praised six-volume series chronicling the operational history of British naval aviation from the earliest days to the present.

By the end of the day on December 6, 1941, the American Pacific fleet at Pearl Harbor lay shattered. In a single devastating surprise attack the Imperial Japanese Navy had demonstrated the awesome striking power of a combined carrier fleet - before proceeding to rampage across the Pacific, seizing territory from the Aleutians to Singapore. With the highly maneuverable Zero fighter and 'Val' dive-bomber, flown by experienced crews, the Japanese were able to overwhelm even the best Allied resistance. But within a year of Pearl Harbor, the tide had turned. The US Navy's successful Guadalcanal campaign marked the beginning of a remarkable fight-

back. Fast new fleet carriers such as the Essex and Independence class warships were introduced and the ruggedly powerful Grumman F6F Hellcat fighter gave the US a clear advantage in the air. In a series of epic naval battles and running skirmishes, the US Navy's Fast Carrier Task Force inflicted massive damage on the Japanese fleet before a new threat began to appear - the kamikaze. Unable to score hits by conventional means, the Japanese took to crashing bomb-laden aircraft directly into American vessels. Yet despite such fanatical tactics, the US Navy's carrier fleet fought its way across the Pacific to launch attacks on the Japanese homeland in 1945. In *Carrier Strike: US Naval Air Warfare in the Pacific*, historian Donald Nijboer tells the full story of the American carrier fleet during the Second World War - the vessels, the crew, the aircraft and the pilots as well as their British Royal Navy allies and
